15 December 2021

Statement on security vulnerability CVE-2021-44228 / VU#930724

To Whom It May Concern:

On December 12, 2021, researchers reported a severe 0-day vulnerability, which is referred to as Log4Shell, in Apache Log4j. The vulnerability is also tracked by other organizations under different identifiers, such as CVE-2021-44228 or CERT Coordination Center VU#930724.

Belden's Product Security Incident Response Team (PSIRT) has investigated these vulnerabilities and determined that **all networking devices and software tools** sold under the **Hirschmann brand** are **not affected** by the vulnerability mentioned above.

Belden's PSIRT policy is to publish security bulletins for Belden products and its various brands at https://www.belden.com/security.

Due to the high attention this vulnerability has received, we have decided to deviate from our policy to provide this statement.

Thank you for your trust. If you have any further questions, please contact your local Belden sales team.

Kind regards,
Hirschmann Automation and Control GmbH

ppa. Dr. Thomas Niessen
VP Business Development
